

Electric UV Light Fly Trap

- Robust construction
- Simple glue board technology
- Flexible and easy installation
- Easy cleaning and service
- Replacement UV tubes and glue boards available separately

The trap attracts flying insects with a strong UV light and captures them with a black, sticky glueboard. The process is very simple, with no electric buzzing when insects are captured and without any insect explosion, which can occur with electronic fly zappers.

It has a slim design and will provide protection for areas up to 80m².

The fly trap has a high quality, durable metal construction and 3 way mounting. It can be wall mounted, ceiling mounted (fixings included) or free standing and is simple to install.

Two Philips actinic 15W ultraviolet tubes are used inside the unit. It also has an easy to remove front cover giving easy access for replacing the glueboard and UV tubes. The fly trap is environmentally friendly as flies and other light sensitive flying insects are attracted to the ultraviolet bulbs, this means that there are no chemicals to use, it is pollution free and it is harmless to humans and pets.

The ultraviolet tubes need to be replaced once a year and the glueboard needs to be replaced every 4-6 weeks. Replacement parts are available separately.

Pests: Flies, Sandflies, and other flying insects

Uses: Food and meat processing facilities, cafes, restaurants, homes, patios (covered), garages, sheds, warehouses and more.

SPECIFICATIONS

Dimensions: 52cm x 38cm x 10cm

Shipping Weight: 12 pounds

Power Requirements: 240vAC

UV tubes: Philips Actinic (2 tubes included)

Coverage: Up to 80 sqm

Compliance: CE listed.
